Found Lying in Pool of Blood.

The first outward sign of Contagious Blood Poison is a small sore or blister. As the poisonous virus becomes more firmly entrenched in the blood a red cruption appears on the body, the mouth and throat ulcerate, the hair begins to come out, glands in the neck and groin swell, copper colored spots appear on the breast, back, etc., and the unfortunate victim finds himself diseased from head to foot. Mercury and potash do not cure Contagious Blood Poison; they shut the disease up in the system and remove the outward symptoms for awhile, but when the treatment is left off the trouble returns. Then the system being weakened from the action of these strong minerals the disease makes more rapid headway than before. S. S. S. is the antidote for Contagious Blood Poison. It cures permanently and certainly by going down into the blood and removing every vestige of the virus. It is free from all minerals, and while purifying the blood it builds up the entire system by its fine tonic effects. S. S. S. destroys every particle of the poison and removes all danger of transmitting it to others. S. S. S. cures Contagious Blood Poison because it is a perfect blood purifier. Book with instructions for self treatment and any medical advice free.
